## Signals

1 Flag ● 2 Watch ● 2 Clear

A 2024 shop (960 sf) is missing from the record **FLAG**  
Permit BP-2024-1187 closed; the structure was never added. Likely under-assessed, not over.

Value jumped +8.9% year over year **WATCH**  
\$471K → \$513K. Tracks a genuinely rising Southridge market — but it is the kind of jump owners call about.

Covered patio (480 sf) not fully captured **WATCH**  
On the sketch; contributes ~3% of building value under the Benton Method. Reconcile for consistency.

Assessment-to-sale ratio sits at 0.97 **CLEAR**  
Inside the IAAO 0.90-1.10 equity band against three recent neighborhood sales.

No appeals on file in six years **CLEAR**  
Stable history; low contest risk if the value holds.

WHAT IT MEANS

## Interpretation

The valuation is defensible. The +8.9% lift tracks a genuinely rising Southridge market, and the 0.97 neighborhood ratio keeps the parcel inside the equity band. The one real exposure is the 2024 detached shop (BP-2024-1187) — 960 sf that never landed on the improvement record. Under the Benton Method a shop of this class typically adds 15-18% of building value, so the current total most likely understates true value rather than over-assessing it. That makes this parcel low-risk on appeal but a clear candidate for a field check before the next roll.

DO THIS NEXT

## Now What?

- 1 Queue a field check to confirm the 2024 shop (BP-2024-1187) and add it to the improvement record for the next roll.
- 2 Hold the current value for 2026 — it is well-supported by recent sales and sits inside the equity band.
- 3 Flag the covered patio for sketch reconciliation so its ~3% contribution is captured consistently.
- 4 No appeal action needed; if appealed, the comp set and 0.97 ratio are the defense.
