Top 5 to watch

1 Flag 3 Watch 1 Clear

312 permitted new homes are not yet on the roll FLAG

Mostly Southridge (Kennewick) and Badger Mountain South (Richland). Roll closes soon — this is uncaptured value.

Overall sale ratio has drifted to 0.94 WATCH

County-wide it is still inside the IAAO band, but the fast-growth neighborhoods are pulling it toward the 0.90 floor.

Residential values up +9.3% year over year WATCH

Kennewick Southridge is leading. Expect elevated appeal volume after notices go out.

Commercial vacancy rising on the Clearwater corridor WATCH

Income-approach assumptions for that corridor likely need a second look before certification.

County uniformity (COD) is within standard CLEAR

Dispersion is inside the IAAO uniformity threshold — no broad reassessment trigger this cycle.

WHAT IT MEANS

Interpretation

The county is healthy but running hot in two corridors. Uniformity holds, so there is no case for a broad reassessment. The real work is concentrated: a 312 new homes are built but not yet on the roll, and the same fast-growth neighborhoods driving the +9.3% lift are pulling the overall ratio toward the 0.94 floor. Capture the new construction and the ratio recovers on its own — miss it and you both under-collect and widen inequity. Commercial on the Clearwater corridor is the one area where the income approach, not the market, needs a second look.

DO THIS NEXT

Now What?

- 1 Reconcile the 312 permitted-but-unrolled homes before the roll closes — this is the highest-value action this cycle.
- 2 Pre-stage appeal defense packets for the fastest-rising neighborhoods (Southridge first) ahead of notices.
- 3 Re-examine commercial income assumptions on the Clearwater corridor before certification.
- 4 Hold the cycle plan — county uniformity is within standard; no broad reassessment is warranted.
