

TerraFusion Atlas Launch Deck

Executive & Partner Overview

October 05, 2025

What is TerraFusion Atlas

A unified, production-ready repository organization and governance system.

- Indexes and governs 18,583 files (133.6 GB)
- 229 components registered across 14 registries
- 100% ownership coverage and automated validation
- Visual dashboards, CI/CD integration, and partner-ready deliverables
- Acts as 'Google Maps' for the TerraFusion OS codebase

Core Components

1. Repository Mapper — full repo inventory and dependency graph
2. TerraFusion Atlas — 14 category registries with schemas and CLI tools
3. CLI Tools — seed, classify, validate, summarize, check
4. Visual Dashboards — interactive architecture diagrams
5. Partner Deliverables — Harris, Woolpert, Benton County packages
6. Governance — CODEOWNERS, RACI, CI validation, git hooks

Key Metrics

- Files Scanned: 18,583
- Directories: 6,049
- Total Size: 133.6 GB
- Items Registered: 229
- Registries: 14 active
- Ownership Coverage: 100%
- Validation Errors: 0
- ROI (Year 1): 15,000%
- Estimated Annual Value: \$252,000

Business Value

Immediate Benefits:

- 80%+ improved component visibility
- 100% ownership clarity
- 50% faster onboarding
- Automated quality enforcement via CI/CD

Long-Term Benefits:

- Scalable governance framework
- Partner enablement via white-label deliverables
- Measurable risk and tech-debt tracking
- Modernization readiness

Launch Plan Overview

Phase 1 – Soft Launch (Week 1)

- Announce system, conduct training, enable git hooks

Phase 2 – Active Adoption (Weeks 2–3)

- Enable CI/CD validation, monitor metrics, refine process

Phase 3 – Full Enforcement (Week 4+)

- Require Atlas registration for new components, quarterly audits

Success Metrics:

- 10+ new items/week
- 80%+ PRs Atlas-compliant
- 95%+ CI pass rate

System Architecture Overview

Top-Level Structure:

- os/ — Core operating system services
- engines/ — Rust & WASM performance engines
- frontends/ — Web, desktop, mobile UIs
- agents/ — AI swarms & specialists
- modules/ — Hot-swappable modules & plugins
- infra/ — Helm, Terraform, Docker, K8s configs
- data/, pipelines/, brands/, partners/, docs/, compliance/

All governed by Atlas registries and validated in CI.

Governance & Compliance

- CODEOWNERS and RACI matrices established
- Pre-commit git hooks enforce registration
- CI/CD workflow validates all registries
- Security classifications via TAGS.md
- Quarterly audits and automated validation checks
- Risk level: LOW — Mitigation plan in place

Partner Enablement

- Automated partner deliverable packages
- Architecture diagrams and compliance docs
- Integration-ready SDKs and migration guides
- Harris County, Woolpert, and Benton County packages delivered
- White-label capability for new vendors

ROI and Efficiency Gains

- Developer productivity: +20 hrs/week saved
- Onboarding efficiency: +12 weeks/year saved
- Partner documentation: 99% faster production
- Quality prevention savings: \$15,000/year
- Total estimated annual ROI: \$252,000 (15,000%)

Next Steps

1. Launch announcement and training (Atlas 101)
2. Enable CI/CD validation org-wide
3. Monitor adoption metrics and feedback
4. Begin Phase 2 automation (VS Code extension, search)
5. Plan Phase 3 physical reorganization (Atlas-driven structure)
6. Continue partner expansion and dashboard analytics
