

User VPN Instructions (Cisco Always-On VPN)

Note: **while working remotely**: please connect to the vpn prior to signing into your computer otherwise your network drives will not be available.

1. VPN pre-check

Click **ok** on the “Property of Benton County” notification

When using VPN for the first time (ie. Wireless or Wired), please verify that you are actively connected to an internet source

If you have used vpn before on your device the vpn will consider all non-county network connections as unsecured, this icon will change once you have successfully been connected to the vpn.

You will see

Before logging onto the VPN

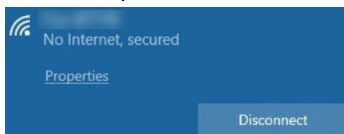

After connecting to the VPN (secure connection)

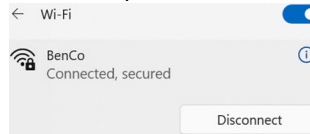

*You will notice that even though you are connected to your wireless source, the windows message will state that there is **no Internet**, please ignore the message (Picture 1) and continue to step 2.

Picture 1 (outside of the county)

Picture 2 (connected to the county wireless)

2. Connecting to the VPN

Click on one of the highlighted icons to connect to the vpn

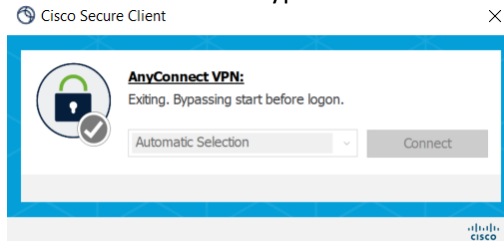

Windows 10

Windows 11

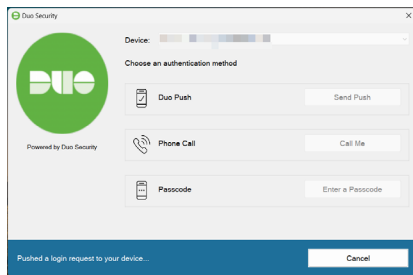

The cisco secure client will now automatically connect you, you do not need to choose a vpn server or connection type.

After the vpn has connected and you see the icon below, please sign into windows as normal with your login credentials

Authenticate with DUO

3. Helpful Information:

If you don't immediately see your network shares after signing in, sign out (don't restart) and sign back in. Now your network shares will be reconnected.
